Go to Tools > Export to select EXCEL 2016 file type and save it in desktop. Run the autocad keygen. Run the autocad solution and setup. Start the autocad and open the excell file. That's all. Q: I cannot change the content of the x axis in ggplot I have the following code to generate an image of a scatter plot: `ggplot(data=p, aes(x=pp, y=sd)) + geom_point() + facet_grid(n ~., scales=list(x=list(relation="free")))) + scale_x_discrete(breaks=c(seq(0, 0.4, by=0.1)), labels=c(1:5))` I'd like to replace the first and the last tick labels with negative and positive values. I tried the following code: `ggplot(data=p, aes(x=pp, y=sd)) + geom_point() + facet_grid(n ~., scales=list(x=list(relation="free")))) + scale_x_discrete(breaks=c(seq(0, 0.4, by=0.1)), labels=c(1:5)) + scale_x_continuous(trans="reverse", labels=c("-2", "0", "1", "2", "3"))` But it fails. I know that this is a problem related to the possible lack of vctrs or ggplot2-version. I get the following warning: Warning message: In `ggplot2::ggplot.aes(x = x, y = y) + geom_point() + facet_grid(n ~., scales = list(x = list(relation = "free")))` + `scale_x_continuous(trans = "reverse", labels = c("-2", "0", "1", "2", "3"))` + `scale_y_continuous(trans = "reverse")` + `coord_flip()` : data points undefined in plotting region Any ideas? Thanks in advance. A: Try changing the labels, and reverse their positions using the `coord_flip()` command: `ggplot(data=p`

Convert to Mesh: Create a primitive solid surface with AutoCAD as a 2D sketch. This lets you visualize 3D objects and have them placed on a 2D sketch. (video: 7:43 min.) **Vector Curve Direct Geometry Editing:** Save time and effort by editing vector curves in geometry. For example, change the length or angle of a curve to easily create right angles, sweep arcs, or a circle with center point. (video: 10:17 min.) **De-Rasterize:** Keep your hand-drawn vector artwork. De-rasterize shapes, points, and polygons into lines and curves. (video: 3:51 min.) **Shape Style Panels:** Consolidate style and appearance settings to create a single panel, and apply them quickly and easily to multiple objects, to a group, or to a range of objects. Also, place new drawing objects in certain settings, such as the same style. (video: 6:58 min.) **Improved Project View:** In AutoCAD, project views let you work with your drawing interactively while the rest of your drawing is locked. By contrast, in the revised Project View you can work on the drawing interactively, while the locked parts of the drawing remain locked. You can also work with a locked part and then lock the rest of the drawing. (video: 9:06 min.) **Save Project Work and Publish:** Save your project workspace to your desktop and share it with others, including other PC users. You can even collaborate with others using multiple project views simultaneously. (video: 4:27 min.) **Improved Direct Block Access:** Make certain blocks available directly in the canvas to avoid having to draw them. For example, create a direct block for a two-point line to easily draw a line. (video: 4:45 min.) **Approach Feature Guide:** Have the appropriate approach lines and arrows to guide you through drawing commands. (video: 4:29 min.) **Elevation Views:** Elevate the viewport of an external 3D CAD program. From within AutoCAD, you can then quickly switch to your CAD program and transfer your drawing to a 3D model. (video: 6:32 min.) **Edge Match:** Automatically find the best orientation and alignment of
